Paramjyot Tooray

DevOps Engineer

param_2ray@hotmail.co.uk | 416-528-2923 | LinkedIn | GitHub | Canada, ON

Profile

DevOps Engineer with hands-on experience designing, automating and troubleshooting AWS infrastructure using Terraform, Docker, Kubernetes, Linux and GitHub Actions. Skilled in Infrastructure as Code, CI/CD, cloud networking, monitoring and security, with experience delivering independent projects and collaborating on a team-based cloud engineering platform.

Skills

AWS — EKS, ECS, S3, ALB, VPC, IAM, CloudWatch, ECR, ACM, KMS, SSM, Route53

Git **Linux** **Terraform** **Bash** **Docker** **Networking** **Kubernetes** **GitHub Actions** **Monitoring and Observability**

Professional Experience

CoderCo – DevOps Academy
DevOps Engineer
09/2025 – Present | Canada, ON

- Designed and deployed production-style **ECS Fargate** and **Kubernetes (EKS)** platforms using **Linux**, **Terraform**, **Docker**, and cloud-native tooling.
- Built **CI/CD** automation and **GitOps** workflows using **GitHub Actions** and **ArgoCD** to automate application deployments and infrastructure delivery.
- Strengthened pipeline security using **AWS OIDC** authentication, eliminating long-lived credentials and enforcing **least-privilege IAM** access.
- **Collaborated** with engineers on a **team-based** AWS EKS microservices project, using Git branches, pull requests, code reviews, and **technical discussions** to coordinate infrastructure changes before merging into main.
- Investigated infrastructure and deployment issues using **Kubernetes diagnostics, application logs, and AWS monitoring tools**, documenting findings and contributing to **troubleshooting** and platform reliability.
- Implemented secure networking architecture using **VPCs**, **public/private subnets**, **NAT gateways**, **ALBs**, **Route53**, **security groups**, and **HTTPS** ingress patterns.
- Implemented cloud monitoring, alerting, and logging using **CloudWatch**, **Prometheus**, and **Grafana** to monitor service health, investigate technical issues, improve infrastructure visibility, and support incident detection.
- Reduced Docker image size by **97%** from **2.55 GB to 80 MB** using **multi-stage builds**, improving deployment speed, performance, and security posture.
- Used **Bash scripting** and **Python fundamentals** to support **Linux administration**, automate routine tasks, and troubleshoot cloud infrastructure and application environments.

Projects

Collaborative AWS EKS Microservices Platform | CoderCo Team Simulation

Amazon EKS · Terraform · Kubernetes · Helm · ArgoCD · Karpenter · GitHub Actions · AWS Secrets Manager · KMS

Collaborated with a four-member team on an AWS EKS platform for nine Go microservices, using Git branches, pull requests and code reviews. Contributed AWS Secrets Manager and KMS Terraform configurations, Helm-based Kubernetes configurations, Karpenter autoscaling manifests and ArgoCD deployment planning.

Production-Style Amazon EKS Platform with GitOps, HTTPS and Observability

Amazon EKS · Terraform · ArgoCD · GitHub Actions · Helm · Traefik · Prometheus · Grafana · cert-manager · Route53 · Cloudflare

Built an AWS EKS platform using Terraform, GitHub Actions and ArgoCD for automated deployments. Configured HTTPS ingress, DNS, IAM security and Prometheus/Grafana monitoring.

Production-Style ECS Fargate Monitoring Platform with Gatus

Amazon ECS Fargate · Terraform · GitHub Actions · IAM · ALB · CloudWatch · Docker · SSM

Built an AWS ECS Fargate monitoring platform using Terraform and automated CI/CD with GitHub Actions and OIDC authentication. Implemented private networking, HTTPS and CloudWatch logging, while reducing Docker image size by 97% through multi-stage builds.

Education

BA Business Studies - London South Bank University
