Profile

DevOps Engineer with hands-on experience designing and automating AWS infrastructure using Terraform, Docker, Kubernetes and GitHub Actions. Built ECS and EKS platforms and contributed to a nine-microservice EKS V2 team project through CoderCo. Reduced an ECS Docker image from 2.55 GB to 80.4 MB, achieving a 97% reduction using multi-stage builds. Experienced in CI/CD, cloud networking, infrastructure security and observability.

Skills

AWS — ECS, EKS, VPC, IAM, CloudWatch | **CI/CD** — GitHub Actions | **Scripting** — Bash | **Git**

Linux | **ArgoCD** | **Helm** | **Terraform** | **Docker** | **Networking** | **Kubernetes**

Prometheus | **Grafana** | **Amazon SQS** | **Redis** | **Amazon RDS** | **PostgreSQL**

Professional Experience

Coderco 09/2025 – Present | Brampton, Canada

DevOps Engineer

- Designed and implemented cloud infrastructure with an emphasis on automation, security, scalability and reliability.
- Collaborated on a nine-microservice **EKS** platform during a four-week CoderCo engineering simulation.
- Provisioned VPCs, subnets, load balancers, security groups and **IAM** roles using modular **Terraform**.
- Integrated **AWS Secrets Manager** and **KMS** with scoped **IAM** permissions for **Kubernetes** workloads.
- Automated infrastructure provisioning and deployments using **GitHub Actions**, OIDC and **ArgoCD**.
- Configured HTTPS ingress, automated DNS and TLS using **Helm**, **Traefik**, **ExternalDNS** and **cert-manager**.
- Integrated **CloudWatch**, **Prometheus** and **Grafana** for infrastructure monitoring and troubleshooting.
- Reduced an **ECS Docker image** from **2.55 GB** to **80.4 MB**, achieving a **97%** reduction using multi-stage builds.
- Integrated **Trivy** and **Checkov** into **CI/CD** pipelines for container and **Terraform** security scanning.
- Deployed containerised applications using **ECS Fargate**, **ECR** and Application Load Balancers.
- Implemented **GitOps** workflows with **ArgoCD** to manage **Kubernetes** application deployments.
- Diagnosed deployment failures involving **IAM**, load balancer routing, TLS and **Kubernetes** configurations.
- Configured **Kubernetes** Deployments, Services and Ingress resources to support containerised applications.
- Implemented **AWS** networking components, including public and private subnets, NAT gateways and routing tables.
- Collaborated through Git branches, pull requests and team stand-ups to coordinate infrastructure changes.

Projects

AWS EKS Microservices Platform
A **Kubernetes** based e-commerce order fulfilment platform consisting of nine Go microservices, developed during a four-week CoderCo team simulation.

- Nine containerised Go microservices supporting distributed e-commerce order processing.
- AWS infrastructure defined through modular **Terraform**, with workloads hosted on **Amazon EKS**.
- **PostgreSQL** and **Amazon RDS** for persistent data storage, with **Redis** backed rate limiting to control API request traffic.
- Helm based **Kubernetes** deployments with **AWS Secrets Manager**, **KMS** and scoped **IAM** permissions.
- Cloud native architecture incorporating **CI/CD**, **GitOps**, monitoring and secure service connectivity.

Amazon EKS Production Platform
A **Kubernetes** application platform designed to demonstrate automated deployments, secure HTTPS access and cloud native infrastructure management.

- **Kubernetes** based infrastructure hosted on **Amazon EKS** with automated application deployment and management.
- **GitOps** driven application delivery using **ArgoCD**, Helm and **GitHub Actions**.
- Automated DNS, HTTPS ingress and TLS management using **Traefik**, **ExternalDNS** and **cert-manager**.
- **Terraform** managed Amazon **EKS** infrastructure incorporating VPC networking and **IAM** security.
- **Kubernetes** Services and Ingress enabling secure application routing and internal connectivity.

ECS Fargate Healthcheck Platform
A containerised health monitoring platform running Gatus on **AWS ECS Fargate** to monitor application availability.

- Serverless container hosting through **ECS Fargate** without managing underlying **EC2 instances**.
- Automated endpoint health monitoring using Gatus to track application availability.
- **Terraform** managed VPC networking, Application Load Balancers and HTTPS connectivity.
- Automated **CI/CD** using **GitHub Actions** and OIDC, with **Trivy** and **Checkov** security scanning.
- Optimised Docker image from **2.55 GB** to **80.4 MB**, achieving a **97%** reduction.
