👤 Profile

DevOps Engineer with hands-on experience building production-style AWS cloud infrastructure using Terraform, Docker, Kubernetes and GitHub Actions. Experienced designing Infrastructure as Code, CI/CD pipelines, cloud automation, observability and secure application delivery, with a focus on scalability, reliability and continuous improvement. Passionate about building secure, automated cloud platforms and continuously expanding my skills through hands-on projects.

🧠 Skills

AWS — EKS, ECS, S3, ALB, VPC, IAM, CloudWatch, ECR, ACM, KMS, SSM, Route53

Git

Linux

Terraform

Bash

Docker

Networking

Kubernetes

GitHub Actions

Monitoring and Observability

📁 Professional Experience

CoderCo

DevOps Engineer

09/2025 – Present |
Canada, ON

- Architected and operated **scalable AWS cloud infrastructure** supporting secure, highly available **containerized workloads** and automated application delivery.
- Designed and deployed production-style **ECS Fargate** and **Kubernetes (EKS)** platforms using **Linux**, **Terraform**, **Docker**, and cloud-native tooling.
- Built automated CI/CD and **GitOps** workflows using **GitHub Actions** and **ArgoCD** for application deployments and infrastructure delivery.
- Implemented secure CI/CD authentication using **AWS OIDC**, eliminating long-lived credentials and enforcing least-privilege IAM access.
- Implemented secure networking architecture using **VPCs**, **public/private subnets**, **NAT gateways**, **ALBs**, **Route53**, **security groups**, and **HTTPS** ingress patterns.
- Configured **Kubernetes** services, ingress controllers, **Helm** deployments, **cert-manager**, and automated **TLS certificate management**.
- Implemented monitoring and observability using **CloudWatch**, **Prometheus**, and **Grafana** for infrastructure visibility and incident detection.
- Troubleshoot infrastructure, networking and deployment issues using **CloudWatch logs**, metrics and systematic **root cause analysis**.
- Reduced Docker image size by **97%** from **2.55 GB to 80 MB** using **multi-stage builds**, improving deployment speed, performance, and security posture.
- Managed container image workflows using **Amazon ECR** and automated deployment pipelines integrated with **GitHub Actions**.

📁 Projects

Production-Style Amazon EKS Platform with GitOps, HTTPS and Observability

Amazon EKS · Terraform · ArgoCD · GitHub Actions · Helm · Traefik · Prometheus · Grafana · cert-manager · Route53 · Cloudflare

Built a production-style Kubernetes platform on Amazon EKS using Terraform and GitOps principles. Automated infrastructure and application delivery with GitHub Actions and ArgoCD, implemented secure HTTPS ingress using cert-manager and Let's Encrypt, configured Route53 and Cloudflare DNS integration, and deployed Prometheus and Grafana for observability. Designed secure networking, IAM access controls and reusable infrastructure modules to support scalable containerized workloads.

Production-Style ECS Fargate Monitoring Platform with Gatus

Amazon ECS Fargate · Terraform · GitHub Actions · IAM · ALB · CloudWatch · Docker · SSM

Built a production-style monitoring platform on Amazon ECS Fargate using Terraform, Docker and GitHub Actions. Implemented secure OIDC-based CI/CD pipelines, private networking, CloudWatch logging and IAM least-privilege access controls. Optimized Docker images using multi-stage builds and deployed scalable workloads behind an Application Load Balancer with HTTPS support.

🎓 Education

BA Business Studies - London Southbank University
